AUTUMN BLEND

For those who prefer the look of traditional brick, we have created Georgetown Colonial® Pavers with warm hues and vintage colors in a range of kiln-fired tones. *Our *Preservation Colors* are combinations of our standard colors that can either be custom-blended at our plant on a made-to-order basis, or mixed at the jobsite during installation.

We color our pavers and walls with the highest quality pigments and saturate them throughout, not just at the surface. You might even say that our beauty is more than skin deep! When choosing colors, be sure to make your final selection from actual samples. While we have taken great care to ensure that the pictures in this brochure realistically portray the product colors, keep in mind that in some cases, the pavers may have been sealed and that color is influenced by the angle of light and the time of day when the photo is taken.

As subtle shade variations are inherent in colored concrete products made with natural ingredients, the product you receive may vary slightly in color and texture from samples. In addition, cubes of product may contain a different predominance of color and texture, and the size of the units also influences the distribution of color. We recommend that product be selected randomly from several cubes during installation to obtain a uniform distribution of color.
